

Ilaria Bruner is a PhD student in Public Policy for Cohesion and Convergence in the European Scenario at the Department of Political Science of the University of Naples Federico II, where she graduated with honours and academic distinction in International Relations with a thesis in Economic Geopolitics. Her research interests focus on the role of new technologies in current geopolitical dynamics and the impact they have on traditional geographical categories and spatial planning. In order to better grasp current geographical complexity, she is deepening the study of GIScience and remote piloting systems. She is a member of the Osservatorio Territori Digitali (Te|Di) association, for which she oversees communication, as well as of the main Italian geographical and cartographic associations. She has carried out study periods abroad as part of the Erasmus+ Study in Bochum (Germany) and Traineeship programmes in Málaga (Spain), having also participated in several European projects.
